General Information .....37

The information in this catalog should be used as a guide for your consideration, investigation and verification. This information does not constitute a warranty or representation, and we assume no legal responsibility or obligation with respect thereto and the use to which such information may be put.

OILITE and EXCELITE are Registered Trademarks of Beemer Precision, Inc in the USA, Canada, United Kingdom and European Union

# GENERAL CHARACTERISTICS and TYPICAL BEARING USES

Oilite bearing products are made by the P/M process, with close controls on materials and manufacturing to produce the premier self-lubricating bearing. With the emphasis on quality throughout the process, we produce Oilite bearings with large interconnected pores vital for the channeling of lubricants to areas between the shaft and bearing. At rest, the capillary action will recover lubricant from the surface and replenish the reservoirs. This porosity feature of Oilite is the most sought-after quality of our bearings.

## THE P/M PROCESS

Fine powders are combined and blended into a mix and are compacted in a die under high pressure. The compacted parts are sintered at high temperature in a protective atmosphere belt furnace. Sintered parts are then sized to obtain the exact dimensions and close tolerances desired. The final step in the P/M process is vacuum impregnation of the bearings, or filling the pores with lubricant.

## TYPICAL PROPERTIES\* OILITE BEARING MATERIALS

| PROPERTIES                   | OILITE BRONZE† | SUPER OILITE | SUPER OILITE 16 |
|------------------------------|----------------|--------------|-----------------|
| <b>Composition — Percent</b> |                |              |                 |

\*Bearings may exhibit appreciable differences in properties due to size, shape, thickness, etc.  
\*\*For .001" permanent set on test specimens 1-1/4" diameter by 1" long.

## ADVANTAGES and APPLICATIONS

### OILITE

Self-lubricating, highly wear-resistant, ductile, conformable and corrosion resistant. Large pore structure complete with complete alpha phase bronze and twinning. Most widely used of all Oilite bearing materials.

Used in appliances, business machines, cylinders, exercise apparatus, lawn and garden equipment, medical applications, material handling, packaging and printing machines, and tools.

### OILITE PLUS

The advantage of Oilite *Plus* is realized in applications in which mixed-film, and boundary lubrication is exhibited. These kinds of conditions occur in well over 75% of all self-lubricating bearings applications.

Shaft oscillation or slow speed, intermittent use, pulsating or uneven loads are conditions that inhibit full-film lubrication from developing or being maintained. These applications would benefit significantly from using Oilite *Plus*.

Oilite *Plus* features a complex bearing system that greatly reduces friction. The impregnation of the bearing includes a finely dispersed PTFE in an oxidation and corrosion inhibiting turbine oil. On average a 17% reduction of friction will result in smoother and quieter operation, easier “break-in”, lower power requirements and longer life.

Applications include all equipment in the Oilite section with emphasis on agricultural and construction equipment, material handling machines, man-lifts and computer peripherals.

### SUPER OILITE

Self-lubricating, harder, higher strength and generally more economical than Oilite bronze, but a lower speed rated bearing material for general application. Recommended for high load applications at low speeds.

Used in farm equipment, off-road equipment, winches, sheaves, conveyors, pulleys, etc.

### SUPER OILITE 16

Self-lubricating. Similar metallurgically to Super Oilite, but heat treated to a particle hardness greater than Rc50. High compressive strength for extreme load, low speed reciprocating and oscillating applications. Requires hardened steel shaft.

Used in earth-moving equipment, cranes and hoists, railway brake rigging, presses, conveyors, etc.

### LOADS AND SPEEDS

The best method for evaluating the acceptability of Oilite bearings for any given application is by using PV factor (Pressure x Surface Velocity) where:

P = the load in (psi) on the projected bearing area (Bearing ID x Length).

V = surface velocity of the shaft in feet per minute (SFM).

$$PV = \frac{W}{LD} \times \frac{\pi DN}{12} = \frac{3.14 WN}{12L}$$

W = total load on bearing (pounds)

L = bearing length (inches)

D = ID of bearing (inches)

N = shaft speed (rpm)

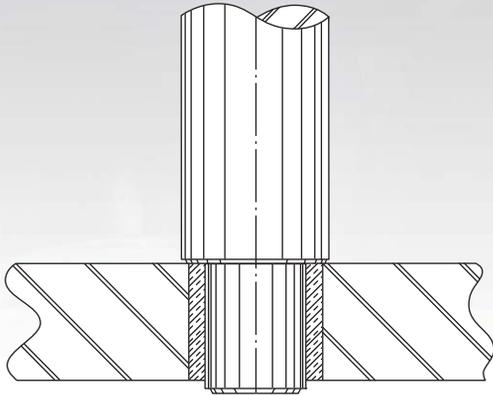

| MATERIAL      | NORMAL UPPER LIMITS FOR OILITE BEARING MATERIALS |               |                |         |
|---------------|--|---------------|----------------|---------|
|               | PV   | P(PSI) STATIC | P(PSI) DYNAMIC | V (sfm) |
| OILITE BRONZE | 50,000   | 8,000         | 2,000          | 1,200   |
| SUPER OILITE  | 35,000   | 20,000        | 4,000          | 225     |
| SO-16         | 75,000   | 50,000        | 8,000          | 35      |

This information, based on our experience, is in line with accepted engineering practice and is believed to be reliable. Oilite bearings should not be used in applications that exceed operating conditions outlined, either in this catalog or in other information provided. Beemer Precision Inc. assumes no obligation or liability in connection with its use or the users end product.

# INSTALLATION, SIZING and SHAFTING

## INSTALLATION

Bearings are usually installed by means of a shouldered arbor plug inserted in an arbor press. A chamfer in the housing bore is necessary to serve as a lead for the bearing. An unchamfered edge might shear metal from the bearing OD, seriously reducing the press fit. The OD chamfer on the lead end of the bearing acts as a pilot, and the ID chamfer in the bearing serves as a lead when the shaft is inserted. Any out-of-roundness condition is corrected when the bearing is pressed into the housing. See our interactive website at [www.oilite.com](http://www.oilite.com) to calculate close-ins and press fits.

A Shouldered Arbor

## SIZING

The sizing of the ID is controlled by the method selected. Several methods are commonly used:

### 1. No Tool Contacting ID

The bearing is pressed into the housing without the use of tools. This method allows the ID to close-in without restraint. The approximate amount of close-in is determined by the bearing material wall thickness and housing conditions.

### 2. Combination Insertion and Sizing Plug

The amount of close-in may be controlled by use of a combination insertion and sizing tool. The plug diameter should be approximately .0003" greater than the desired final bearing ID. The plug should fit freely in the bearing ID before installation. When the bearing is pressed into the housing, its ID will close-in on the plug. The interference between the ID and the tools is less than the interference between the OD and the housing. Upon tool withdrawal, the ID will spring back between .0002" and .0005", depending on material, bearing size and mounting conditions. The exact amount of the springback range should be determined by actual tests.

### 3. Roller-Type Burnisher

Roller-type burnishing tools can be used for high-production work, especially where ID tolerances are to be held within .0005".

## SHAFTING

Optimum bearing operation requires a shaft of proper material, hardness and surface finish. Generally, carbon steel shafts are preferred over stainless steels. Stainless steel shafts can be problematic under certain conditions and applications. Contact our engineering department for assistance.

Shaft hardness must always be harder than the bearing (particle hardness) selected. Hardened shafts add to the load carrying ability of the bearing. Along with hardness, surface finish will improve the bearing's performance. Each application is unique and, therefore, load considerations and subsequent testing is recommended.

## MACHINING

Machining Oilite presents no problems. There are a few basic procedures that should be followed to preserve the open-pore structure of the Oilite material so it will retain its full self-lubricating qualities. Cutting tools must be sharp. For this reason tungsten carbide tooling is highly recommended since they hold a cutting edge much longer. This preserves the open-pore structure from which oil can flow freely. A dull tool will smear the pores, greatly reducing these self-lubricating qualities in the material.

Oilite bearings may be reamed provided a dead-sharp cutting tool is used. However, reaming does not destroy porosity more than single point tooling. Honing and grinding are never recommended on Oilite bearings on any surface which will become the bearing surface. These operations will smear the pores and will not allow the oil to flow freely.

## LUBRICATION

Lubrication is a very important consideration, since certain conditions will necessitate the need for different oils and lubricants. These choices can greatly affect the performance and efficiency of the bearing.

Oilite is a metallic sponge with the lubricant stored in the interconnected pores of the bearing. Capillary action holds the lubricant in the bearing and prevents it from dripping. Pressure and/or heat applied to the bearing brings the lubricant to the surface where it forms a protective oil film or optimally a hydrodynamic wedge between the bearing and the shaft.

### LUBRICANTS

Oilite bearings are vacuum impregnated with oil. There are many grades of oils and lubricants specifically developed to meet special or extreme conditions or requirements such as, high and low temperature, high loads, high speeds, low loads, low speeds, plastic compatibility or FDA compliance. Many applications combine several of these conditions.

Viscosity is the most important property of a lubricant. Viscosity is the internal friction of a fluid, or its resistance to flow. Speed and subsequent temperature build-up can cause the viscosity to become too thin to support the shaft loads, resulting in bearing failure.

## CHAMFERS

### Recommended Bearing Chamfers

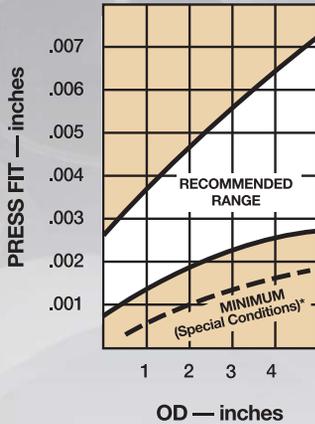

| RANGE                                    | MINIMUM CHAMFER SIZE             | TYPE |
|--|----------------------------------|------|
| ALL THIN WALLS UP TO AND INCLUDING 1/16  | ROUNDED END (1/64 "TRUE RADIUS") | A    |
| ON WALLS GREATER THAN 1/16 UP TO 3" O.D. | 1/64 X 45°                       | B    |
| ON ALL BEARINGS 3" O.D. AND OVER         | 1/32 X 45°                       | B    |

# PRESS FIT VALUES / BEARING CLEARANCE / ID CLOSE-IN

## PRESS FIT VALUES

### Oilite and Super Oilite Bearings

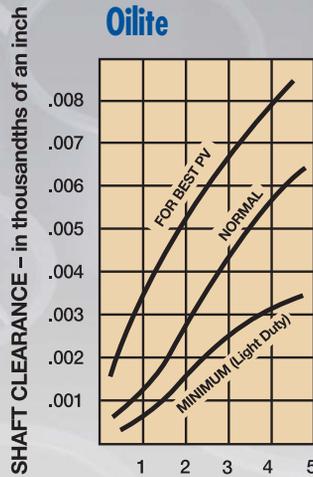

Considerable force is required to seat large bearings when press fit approaches the top of the recommended range.

\*Less than normal press fit proves satisfactory:

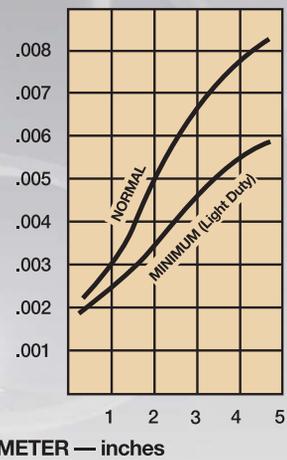

- (1) if the bearing is long and the wall is not exceptionally thin, and
- (2) if the bearing is also carrying a moderate load exerted only in one direction.

**Super Oilite®**  
RAW MATERIALS

## SUPER OILITE BAR STOCK

Super-Oilite is an oil cushioned, self-lubricating bearing material with a ferrous base. Therefore it is somewhat stronger than OILITE bronze—especially for heavy loading at slow speeds—and considerably more economical. Its overall rating, however, is not as high as OILITE bronze for general bearing purposes. It is available in both cored and solid bar stock which can be machined for emergency repairs, prototypes and new design requirements.

# Oilite<sup>®</sup> Non-Tox<sup>®</sup>

BEARINGS

## An Excellent Solution for the Food Processing Industry

- Available in Oilite<sup>®</sup>, Super-Oilite<sup>®</sup> and M-Series<sup>®</sup> (metric) self lubrication sleeve and flange bearings.
- Available in a variety of materials and sizes allowing for easy substitution.

oilite<sup>®</sup>

**OILITE® NON-TOX®**

- Lubricant meets USDA H-1 standards.
- RoHS Compliant.
- Lubricant can extend bearing life at higher and lower operating temperatures (-75°F to +300°F).
- All bearings are individually packaged to ensure clean storage and installation.

## SUPER OILITE® NON-TOX®

- Lubricant meets USDA H-1 standards.
- RoHS Compliant.
- Lubricant can extend bearing life at higher and lower operating temperatures (-75°F to +300°F).
- All bearings are individually packaged to ensure clean storage and installation.

oilite®

## Excelite TX<sup>®</sup>

### THE SYSTEM

Excelite TX. A unique bearing combining proven materials with a three-tiered, self-contained lubrication feature. This bearing was developed for high load, low speed application and is ideally suited for all types of rotating and oscillating motion. Additional lubrication introduced to the bearing where necessary can further performance.

### THE ADVANTAGE

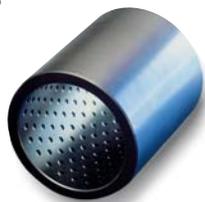

Excelite TX has many cost saving benefits in addition to its performance features. Unlike composite or strip bearings, Excelite TX's entire wall thickness is made of the bearing material. Standard sizes listed are arranged to be compatible with standard cast bronze bushings and are designed to be installed without subsequent sizing operations. The Excelite TX Advantage...versatility of design and cost reduction.

### THE APPLICATIONS

- Agricultural Equipment
- Glass Processing Machines
- Golf and Lawn Vehicles
- Material Handling Trucks
- Earth Moving Equipment
- Paper and Textile Machines
- Cable Handling Equipment
- Construction Cranes
- Packaging Machines
- Hoisting Devices
- Hydraulic Cylinders
- Printing Presses
- Filling Equipment
- Valves

### EXCELITE DTX<sup>®</sup>

Excelite DTX has grease pockets on the bearing surface. These pockets can store lubricants generated directly from the bearing itself or those introduced externally. These same pockets can also provide a place for foreign contaminants to collect and thus prolong bearing life. Consult our sales engineers for additional application and design information.

### EXCELITE HTX<sup>®</sup>

This self-lubricating material is the extreme duty Excelite bearing material ideally suited for the most demanding applications. Shafting used against Excelite HTX should be Rockwell 45C or higher, and the best possible finish should be maintained. Excelite HTX bearings are available in the sizes listed in the Excelite TX section.

# GENERAL CHARACTERISTICS

## LOADS AND SPEEDS

The best method for evaluating the acceptability of Excelite TX bearings for any given application is by using PV factor (Pressure x Surface Velocity) where:

P = the load in (psi) on the projected bearing area (Bearing ID x Length).

V = surface velocity of the shaft in feet per minute (SFM).

$$PV = \frac{W}{LD} \times \frac{\pi DN}{12} = \frac{3.14 WN}{12L}$$

W = total load on bearing (pounds)

L = bearing length (inches)

D = ID of bearing (inches)

N = shaft speed (rpm)

| MATERIAL     | NORMAL UPPER LIMITS FOR EXCELITE MATERIALS |                |                 | V (sfm) |
|--------------|--|----------------|-----------------|---------|
|              | PV   | P (psi) STATIC | P (psi) DYNAMIC |         |
| EXCELITE TX  | 40,000                                     | 25,000         | 5,000           | 220     |
| EXCELITE HTX | 70,000                                     | 40,000         | 7,500           | 40      |

## BP3<sup>+</sup> + MOLYBDENUM DISULFIDE

| CHARACTERISTICS        | HIGH FILM STRENGTH |
|------------------------|--------------------|
| VISCOSITY (SUS) @100°F | 2420               |
| @210°F                 | 141                |
| VISCOSITY INDEX        | 90                 |
| FLASH POINT (°F)       | 460                |
| FIRE POINT (°F)        | 525                |
| POUR POINT (°F)        | +10                |
| SAE EQUIV. (VISCOSITY) | 130 (EP)**         |

BP3<sup>+</sup> and Moly has an extremely stable suspension of uniform microscopic Molybdenum Disulfide particles. As an additive Molybdenum Disulfide substantially improves the extreme pressure, anti-wear, and anti-friction capabilities of oils and provides reliable lubrication in those demanding applications that approach boundary lubrication conditions.

## Physical & Mechanical Properties

|                                 |           |           |
|---------------------------------|-----------|-----------|
| DENSITY (GM PER CU. CM)         | 5.9 - 6.3 | 6.2 - 6.6 |
| POROSITY (% OIL BY VOL.)        | 18 MIN.   | 15 MIN.   |
| "K" STRENGTH CONSTANT           | 50,000    | 75,000    |
| TENSILE STRENGTH                | 30,000    | 40,000    |
| ELONGATION (% IN ONE INCH)      | 2%        | 1%        |
| YIELD STRENGTH IN COMP. (PSI)** | 30,000    | 45,000    |

\* Bearings may exhibit appreciable differences in properties due to size, shape, thickness, etc.

\*\* For .001" permanent set on text specimens 1-1/4" diameter by 1" long.

Excelite materials may be altered due to operation conditions and life expectancy requirements. It is possible to change the base material by heat treating or alloy change. It is also possible to vary the lubricant specs or add grooving. Changing the fluorocarbon coating is also done.

## NO "BREAK IN"

Excelite TX virtually eliminates "break in" because of the PTFE coating applied to the bearing surface providing low coefficient of friction for start up.

## LONG LIFE

As long as load rating and maximum speed rates are adhered to, Excelite TX can provide good life expectancy. The PTFE coating lasts far beyond "break in", and the fully impregnated P/M under infrastructure takes over to provide expected life.

## PTFE VALUES

| PROPERTY   | "PTFE" VALUE                        |
|--|-------------------------------------|
| TENSILE STRENGTH @ 77°F (psi) @ 25°C (kg/cm <sup>2</sup> )   | 3,000 - 13,600<br>200 - 920         |

The values shown in this table represent average experience from numerous testing sources and are not intended to be specifications. These values will vary depending upon the individual compositions of the primers and topcoats and the systems used. All technical advice recommendations, application suggestions and services are rendered by the Seller gratis. They are based on technical data which the seller believes to be reliable and are intended for use by persons having skill and know how at their own discretion and risk. Seller assumes no responsibility for results obtained or damages incurred from their use by Buyer in whole or in part.

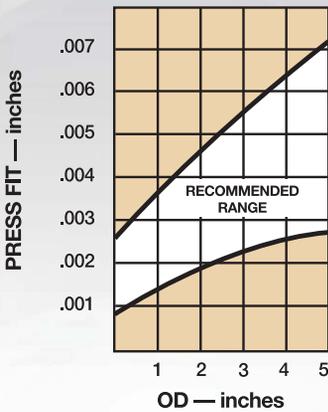

# INSTALLATION and SIZING

Bearings are usually installed by means of a shouldered arbor plug inserted in an arbor press. (See chart of press fit values below.) A chamfer in the housing bore is necessary to serve as a lead for the bearing. An unchamfered edge might shear metal from the bearing OD, seriously reducing the

press fit. The OD on the lead end of the bearing acts as a pilot. Likewise, the ID chamfer in the bearings serves as a lead when the shaft is inserted. Out-of-roundness is corrected when the bearing is pressed into the housing.

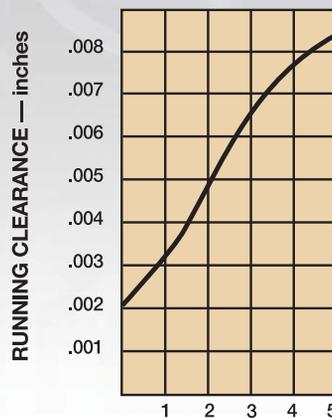

## PRESS FIT VALUES / BEARING CLEARANCE / ID CLOSE-IN

### PRESS FIT VALUES

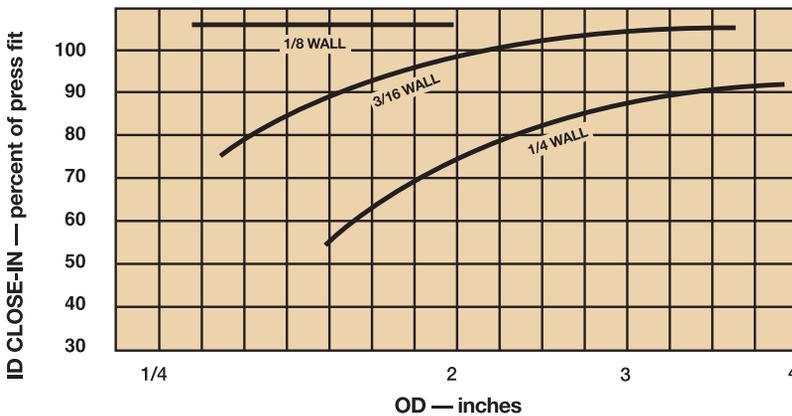

Considerable force is required to seat large bearings when press fit approaches the top of the recommended range. Excelite TX bearings can tolerate these press fits and are necessary to keep the bearings secure in the housing.

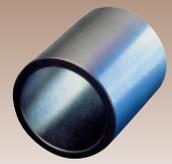

### BEARING CLEARANCE

### ID CLOSE-IN

As related to wall thickness (Approximate Values) for Normal Press Fit

***Special Cast Bronze Bearings + Machined Components***

***Custom Shafting + Bearing and P/M Assemblies***

# oilite<sup>®</sup>

## BEARINGS

### ADDITIONAL MANUFACTURING CAPABILITIES

- Extensive CNC machining facilities produce bearings in many common alloys
- In-house coating and impregnation facilities
- Special machined cast bronze bearings
- Close tolerance P/M bearings
- Graphiting
- Prototyping and sample services are available in P/M and most materials
- Production of shafts in many common steel alloys
- Secondary P/M machining and assembly
- SPC on all required runs
- Grooving

### COMMON BRONZES

| DESIGNATION NAME       | CDA       | MECHANICAL PROPERTIES      |                          |               |  |              |
|------------------------|-----------|----------------------------|--------------------------|---------------|--|--------------|
|                        |           | TENSILE STRENGTH (TYPICAL) | YIELD STRENGTH (TYPICAL) | ELONGATION    | COMPRESSIVE YIELD STRENGTH (0.1 IN. SET/IN.) | HARDNESS BHN |

WARRANTY. Seller warrants that if any product of its manufacture upon examination if found by a Seller's representative to be defective in either workmanship or material under normal use and service Seller, at its option, will repair or replace same free of charge including lowest transportation charges but not cost of installation or removal or will refund the purchase price thereof, provided that Seller receives written claim specifying the defect within ninety (90) day from date of distributor sale or one (1) year from date of factory shipment, whichever occurs first. In no event shall Seller be liable for any claims, whether arising from breach of contract or warranty or claims of negligence or negligent manufacture, in excess of the purchase price. ALL OTHER WARRANTIES EXPRESSED AND IMPLIED INCLUDING ANY WARRANTIES OF MERCHANTABILITY AND FITNESS FOR PARTICULAR USE ARE HEREBY DISCLAIMED. The foregoing expresses all of Seller's obligations and liabilities with respect to the quality of items furnished by it and it shall under no circumstances be liable for consequential, collateral or special losses or damages.
